

California Association of Professional Firefighters Exposure Tracking by FirstForward

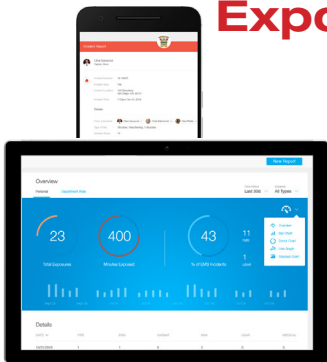

A great partnership to give EVERY CAPF member
FREE access to a system to document exposures

Why track exposures

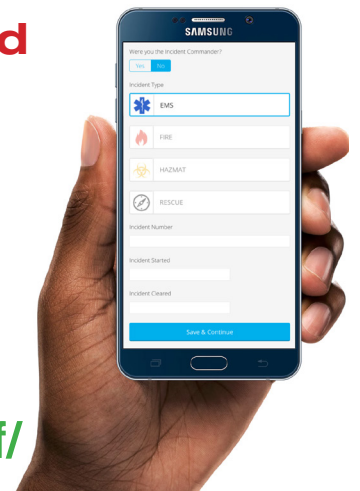

- Fire service personnel are getting cancer and preventable illness at staggering rates.
- Workers' Compensation Presumption laws are a great start, but more can and should be done...It is up to you to prove your job related exposures.
- Just think about all the exposures you experience and how important it is that you track the various exposures within your 20 or 30 year career.
- Over fire service personnels' careers they get exposures to various chemicals, toxic smoke from auto, residential & commercial fires, airborne pathogens, bodily fluids, needle sticks, various hazard materials exposures and numerous other emergency situations.
- Tracking information on these exposures could be the reason a fire service member gets benefits one day or doesn't.
- Exposure Tracking by FirstForward for fire service personnel makes it fast and easy to track these exposures from mobile devices, tablets and computers.
- Entering exposures creates a permanent record with total confidentiality. The data is only accessible to the individual.

Exposure Tracking by FirstForward

- ✓ Mobile enabled
 - Works on all Internet connected devices
- ✓ Easy step-by-step process
 - Free Online training videos & resources
- ✓ Clean printable format
- ✓ No download required

Note: In the 33 year history of the CAPF Long Term Disability Plan (CAPF LTD Plan) cancer rates for fire service personnel have continued to increase. 5% of all illness claims and 29% of all death claims have been cancer related. Documentation through FirstForward will greatly enhance recording future exposure to job related incidents much easier and more confidential.
